100G QSFP28 Single Lambda LR1 Transceiver Hot Pluggable, Duplex LC, 1311nm EML, SMF 10KM, DDM, C-Temp

Part Number: FQ2S-K7-C13-10D

Overview

FQ2S-K7-C13-10D is a QSFP28 Single Lambda transceiver for 100GbE applications especially in Datacom, Data Center & Storage networks applications. It works based on the 100G Single Lambda MSA 100G-LR1 Standard with the typical center wavelength 1311nm. The transceiver incorporates one channel optical signal of 100Gbps(PAM4) from four channels electrical signal of 25Gbps(NRZ) and vice versa up to SMF 10km optical links.

Applications

• 100GBASE Ethernet

TEL+886-2-2898-3830

- Data Centers Switch Interconnect
- Server and Storage Area Network Interconnect

Features

- Compliant with SFF-8665 QSFP28 MSA
- Compliant with IEEE 802.3bm CAUI-4 Interface
- Compatible with 100GBASE-LR1
- Signal Conversion between 53.125GBd PAM4 optical signal and 25.78125Gbps NRZ electrical signal with DSP Gear Box
- Built in Tx CDR and Rx CDR
- Inbuild KP4 FEC
- Hot Pluggable QSFP28 footprint
- CWDM 1311nm EML transmitter
- Duplex LC connector
- 2-wire interface for management and diagnostic monitor compliant with SFF-8636
- Single 3.3V power supply
- Operating Temperature 0~70°C
- Link distance 10km over SM fiber with FEC
- Maximum Power consumption 4.5W
- RoHS compliant

Laser Safety

- This is a Class 1 Laser Product complies with 21 CFR 1040.10 and 1040.11 except for conformance with IEC 60825-1 Ed. 3., as described in Laser Notice No. 56, dated May 8, 2019.
- Caution: Use of control or adjustments or performance of procedure other than those specified herein may result in hazardous radiation exposure.

Note1: The receiver shall be able to tolerate, without damage, continuous exposure to a modulated optical input signal having this power level on one lane. The receiver does not have to operate correctly at this input power.

Note2: Sensitivity is specified at 2.4x10⁻⁴ BER with PRBS31Q.

Note3: DC common mode voltage generated by the host. Specification includes effects of ground offset voltage.

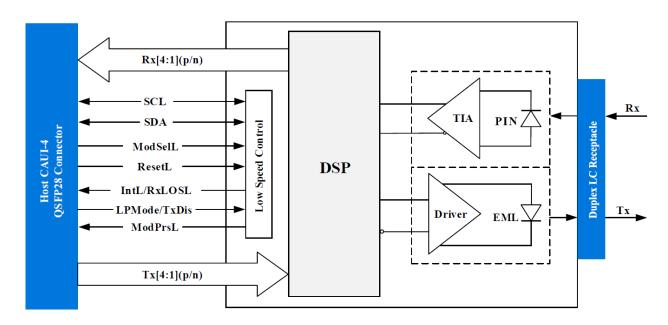

Note4: These test conditions are for measuring stressed receiver sensitivity. They are not characteristics of the receiver.

Note1: GND is the symbol for signal and supply (power) common for QSFP28 modules. All are common within the QSFP28 module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal common ground lane.

Note2: VccRx, Vcc1 and VccTx are the receiver and transmitter power suppliers and shall be applied concurrently. Recommended host board power supply filtering is shown below. Vcc Rx, Vcc1 and Vcc Tx may be internally connected within the QSFP28 transceiver module in any combination. The connector pins are each rated for a maximum current of 1000mA.

Digital Diagnostic Functions

As defined by the QSFP28 MSA, Ficer's QSFP28 transceivers provide digital diagnostic functions via a 2-wire serial interface, which allows real-time access to the following operating parameters:

- Transceiver temperature
- Laser bias current
- Transmitted optical power
- Received optical power
- Transceiver supply voltage

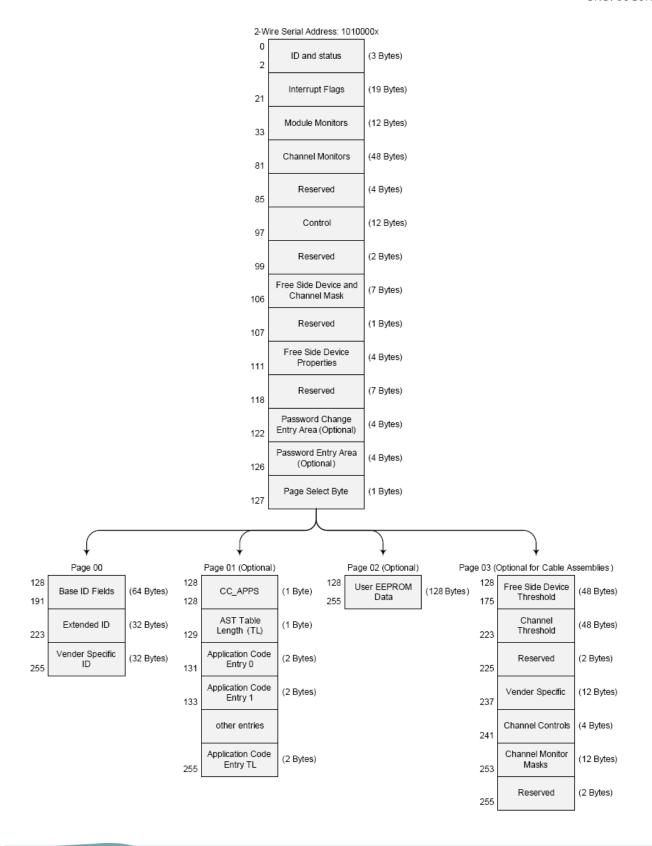

It also provides a sophisticated system of alarm and warning flags, which may be used to alert end-users when particular operating parameters are outside of a factory-set normal range.

The operating and diagnostics information is monitored and reported by a Digital Diagnostics Controller (DDC) inside the transceiver, which is accessed through the 2-wire serial interface. When the serial protocol is activated, the serial clock signal (SCL pin) is generated by the host. The positive edge clocks data into the QSFP28 transceiver into those segments of its memory map that are not write-protected. The negative edge clocks data from the QSFP28 transceiver. The serial data signal (SDA pin) is bi-directional for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The memories are organized as a series of 8-bit data words that can be addressed individually or sequentially. The 2-wire serial interface provides sequential or random access to the 8 bit parameters, addressed from 000h to the maximum address of the memory.

For more detailed information including memory map definitions, please see the QSFP28 MSA Specification.
